***Abstract*—This document contains the solution of the question from NCERT 11th standard chapter 10 exercise 10.2 problem 2**

1 Exercise 10.2

1) Find the equation of the line passing through the point (-4,3) and having slope $\frac{1}{2}$

Slope of line, $m = \frac{1}{2} \Rightarrow$ the direction vector of the line is,

$$\brak{m_1} = \begin{bmatrix} 1 \\ m \end{bmatrix} = \begin{bmatrix} 1 \\ \frac{1}{2} \end{bmatrix} \tag{1.0.1}$$

Hence the normal vector of the line is,

$$\brak{n_1} = \begin{bmatrix} 1 \\ -2 \end{bmatrix}$$

The equation of the line in normal form is,

$$\brak{n_1}^\top \left(\brak{x} - \begin{bmatrix} -4 \\ 3 \end{bmatrix} \right) = 0 \tag{1.0.2}$$

$$\begin{bmatrix} 1 & -2 \end{bmatrix} \left(\brak{x} - \begin{bmatrix} -4 \\ 3 \end{bmatrix} \right) = 0 \tag{1.0.3}$$

$$\begin{bmatrix} 1 & -2 \end{bmatrix} \brak{x} - \begin{bmatrix} 1 & -2 \end{bmatrix} \begin{bmatrix} -4 \\ 3 \end{bmatrix} = 0 \tag{1.0.4}$$

$$\begin{bmatrix} 1 & -2 \end{bmatrix} \brak{x} - (-4 - 6) = 0 \tag{1.0.5}$$

$$\begin{bmatrix} 1 & -2 \end{bmatrix} \brak{x} + 10 = 0 \tag{1.0.6}$$
