## Quiz 10

## S Nithish

Abstract—This document contains the solution of the question from NCERT 9th standard chapter 10 exercise 10.5 problem 4

## 1 Exercise 10.4

1) In the below figure  $\angle ABC = 69^{\circ}$ ,  $\angle ACB = 31^{\circ}$ , find  $\angle BDC$ 

Let the circle be unit circle centred at origin,

$$||\mathbf{x}||^2 = 1 \tag{1.0.1}$$

Let the points A, B, C be such that,

$$C = \begin{pmatrix} 1 \\ 0 \end{pmatrix} \tag{1.0.2}$$

$$A = \begin{pmatrix} \cos \theta_1 \\ \sin \theta_1 \end{pmatrix} \tag{1.0.3}$$

$$B = \begin{pmatrix} \cos \theta_2 \\ \sin \theta_2 \end{pmatrix} \tag{1.0.4}$$

$$BA = \begin{pmatrix} \cos \theta_1 - \cos \theta_2 \\ \sin \theta_1 - \sin \theta_2 \end{pmatrix}$$
 (1.0.5)

$$BA = \begin{pmatrix} -2\sin\left(\frac{\theta_1 - \theta_2}{2}\right)\sin\left(\frac{\theta_1 + \theta_2}{2}\right) \\ 2\cos\left(\frac{\theta_1 + \theta_2}{2}\right)\sin\left(\frac{\theta_1 - \theta_2}{2}\right) \end{pmatrix}$$
(1.0.6)

$$BA = 2\sin\left(\frac{\theta_1 - \theta_2}{2}\right) \begin{pmatrix} -\sin\left(\frac{\theta_1 + \theta_2}{2}\right) \\ \cos\left(\frac{\theta_1 + \theta_2}{2}\right) \end{pmatrix}$$
 (1.0.7)

$$BC = \begin{pmatrix} 1 - \cos \theta_2 \\ -\sin \theta_2 \end{pmatrix} \tag{1.0.8}$$

$$BC = \begin{pmatrix} 2\sin^2\left(\frac{\theta_2}{2}\right) \\ -2\sin\frac{\theta_2}{2}\cos\frac{\theta_2}{2} \end{pmatrix}$$
 (1.0.9)

$$BC = 2\sin\frac{\theta_2}{2} \left( \frac{\sin\frac{\theta_2}{2}}{-\cos\frac{\theta_2}{2}} \right) \tag{1.0.10}$$

$$AC = \begin{pmatrix} 1 - \cos \theta_1 \\ -\sin \theta_1 \end{pmatrix} \tag{1.0.11}$$

$$AC = \begin{pmatrix} 2\sin^2\left(\frac{\theta_1}{2}\right) \\ -2\sin\frac{\theta_1}{2}\cos\frac{\theta_1}{2} \end{pmatrix}$$
 (1.0.12)

$$AC = 2\sin\frac{\theta_1}{2} \begin{pmatrix} \sin\frac{\theta_1}{2} \\ -\cos\frac{\theta_1}{2} \end{pmatrix}$$
 (1.0.13)

$$\angle ABC = 69^{\circ} \tag{1.0.14}$$

$$\implies \cos 69^{\circ} = \frac{\mathbf{B}\mathbf{A}^{\mathsf{T}}\mathbf{B}\mathbf{C}}{\|\mathbf{B}\mathbf{A}\| \|\mathbf{B}\mathbf{C}\|}$$
 (1.0.15)

$$= -\cos\left(\frac{\theta_1 + \theta_2}{2} - \frac{\theta_2}{2}\right) (1.0.16)$$

$$=-\cos\frac{\theta_1}{2}\tag{1.0.17}$$

$$\implies \frac{\theta_1}{2} = (2k+1)180^\circ + 69^\circ \quad (1.0.18)$$

$$\theta_1 = (2k+1)360^{\circ} + 138^{\circ} (1.0.19)$$

$$\theta_1 = -360^\circ + 138^\circ \text{ (for k=-1)}$$
(1.0.20)

$$= -222^{\circ}$$
 (1.0.21)

$$\angle ACB = 31^{\circ} \tag{1.0.22}$$

$$\implies \cos 31^{\circ} = \frac{\mathbf{BC}^{\mathsf{T}} \mathbf{AC}}{\|\mathbf{BC}\| \|\mathbf{AC}\|}$$
 (1.0.23)

$$= \left(\sin\left(\frac{\theta_2}{2}\right) - \cos\left(\frac{\theta_2}{2}\right)\right) \begin{pmatrix} \sin\frac{\theta_1}{2} \\ -\cos\frac{\theta_1}{2} \end{pmatrix}$$
(1.0.24)

$$=\cos\left(\frac{\theta_2 - \theta_1}{2}\right) \tag{1.0.25}$$

$$\implies \left(\frac{\theta_2 - \theta_1}{2}\right) = (k)360^\circ + 31^\circ \tag{1.0.26}$$

$$\theta_2 - \theta_1 = (2k)360^\circ + 62^\circ \tag{1.0.27}$$

$$\theta_2 - \theta_1 = 62^{\circ} \text{ (for k=0)}$$
 (1.0.28)

$$\theta_2 + 222^\circ = 62^\circ \tag{1.0.29}$$

$$\theta_2 = -160^{\circ} \tag{1.0.30}$$

$$A = \begin{pmatrix} \cos 222 \\ -\sin 222 \end{pmatrix} \tag{1.0.31}$$

$$A = \begin{pmatrix} \cos 222 \\ -\sin 222 \end{pmatrix}$$
 (1.0.31)  
$$B = \begin{pmatrix} \cos 160 \\ -\sin 160 \end{pmatrix}$$
 (1.0.32)

$$C = \begin{pmatrix} 1 \\ 0 \end{pmatrix} \tag{1.0.33}$$

Let us take point D such that,

$$D = \begin{pmatrix} 0 \\ 1 \end{pmatrix} \tag{1.0.34}$$

Then,

$$DC = \begin{pmatrix} 1 \\ 0 \end{pmatrix} - \begin{pmatrix} 0 \\ 1 \end{pmatrix} = \begin{pmatrix} 1 \\ -1 \end{pmatrix}$$

$$(1.0.35)$$

$$DB = \begin{pmatrix} \cos 160 \\ -\sin 160 \end{pmatrix} - \begin{pmatrix} 0 \\ 1 \end{pmatrix}$$

$$(1.0.36)$$

$$= \begin{pmatrix} \cos 160 \\ -1 - \sin 160 \end{pmatrix} \quad (1.0.37)$$

$$DB = \begin{pmatrix} -\sin 70 \\ -1 - \cos 70 \end{pmatrix} = -2\cos 35 \begin{pmatrix} \sin 35 \\ \cos 35 \end{pmatrix}$$

$$(1.0.38)$$

$$\cos \angle BDC = \frac{DC^{\top}DB}{\|DC\| \|DB\|} \quad (1.0.39)$$

$$= \frac{-2\cos 35 (\sin 35 - \cos 35)}{(2\cos 35) \left(\sqrt{2}\right)}$$

$$(1.0.40)$$

$$= \frac{\cos 35 - \sin 35}{\sqrt{2}} \quad (1.0.41)$$

$$= \cos (35 + 45) = \cos 80$$

$$(1.0.42)$$

$$\implies \angle DBC = 80^{\circ} \quad (1.0.43)$$
